Michael A. Brown; Examiner

Dear Sir;

I enjoyed visiting with you the other day. We tried to call you the week before but you were out of the office. I was on a two week vacation when your letter was delivered.

As you no doubt are aware I am not a Patent Attorney, and I laid out my Patent application according to the instructions in the "PATENT IT YOURSELF" book authored by Patent Attorney DAVID PRESSMAN.

I am enclosing a copy of what he described should be the layout of a Patent Application. In order to change my application to the layout you suggested would require me to completely re-do the entire layout.

It is very important that this invention is patented so that we may get it in production. Many people are being infected with AIDS each day. Most people will not use the current condoms in production since they are so uncomfortable to use.

People will welcome condoms of the design of my invention. I paid extra to have this invention put on a fast track, yet it appears that it will take as long as any other Patent, if indeed it gets patented at all.

I do not have the money to put these condoms in production, and I need Patent Protection so that I have something to get backing to put them into production.

I suggest you read the entire Patent Application and see if you don't agree that this is the most revolutionary improvement that has ever been thought of to improve condoms.

Any help that you can give me to get this Invention Patented will be appreciated.

Sincerely;

Cleon Griffiths
